Subject: Re: We are upgrading PHP on rushmooribc.co.uk - action required

Dear Sir/Madam,

The PHP versions 5.6 and 7.0 are reaching their end of life. PHP 5.6 will expire on December 31, 2018 and PHP 7.0 on December 3, 2018. This means that the security support for these PHP versions will end. The decision to discontinue is made by PHP.net and is beyond One.com's control.

Your website on rushmooribc.co.uk is currently running PHP version 5.6. During the first half of November 2018, we'll automatically upgrade it to PHP 7.2 which is the newest available version and will ensure you the longest running security support.

After the upgrade has taken place, you'll still be able to temporarily downgrade to PHP 5.6 or 7.0. However, downgrading won't be possible after December 3. If your website is on PHP 5.6 or 7.0 on this date, it will automatically be upgraded to 7.2.

You should prepare your site for the PHP upgrade, preferably as soon as possible, providing you enough time to fix any issues caused by deprecated code. Read more about how to [prepare your site for the PHP upgrade](#).
